Terrateck

EDITORIAL

Dear colleagues, partners, and clients,

Since 2013, our mission has been to promote agriculture that respects both people and the environment by addressing the specific needs of market gardening professionals, all while fostering innovation on a daily basis.

An evolution marked by change and growth

Over the years, our ambitions have been realized through concrete progress. This year has been particularly significant for Terrateck with the completion of our building expansion project in Lestrem (Pas-de-Calais). These modern facilities provide a more pleasant and functional workspace for all our teams, with increased capacity. This development reflects our continued growth and our commitment to creating a stimulating environment for our employees, supporting our efforts in innovation and service.

A shifting agricultural landscape

We are acutely aware of the challenges currently facing the agricultural sector, particularly organic market gardeners, who are dealing with declining consumer purchasing power and, consequently, economic uncertainties. At Terrateck, we face the same challenges as you. Rising purchasing and production costs present a daily struggle. You, the growers with your hands in the soil, are the pillars of our clientele. Stay strong! Despite these complex circumstances, we remain convinced of the relevance and necessity of a virtuous mode of production that respects people and the environment.

A commitment to the future

Our beginnings were modest, but we were driven by unwavering determination. Today, our vision is clearer than ever: to remain a trusted partner for market gardeners by developing innovative solutions tailored to the demands of sustainable agriculture. We firmly believe that innovation remains the key to addressing environmental challenges and supporting our clients in the transition toward more eco-friendly farming practices. We reaffirm our commitment to continuing our efforts with passion, integrity, and perseverance. Our ambition is to push the boundaries of agricultural engineering further and to strengthen our role as a leader for market gardening professionals, both in France and internationally.

A heartfelt thank you

None of this would have been possible without you, our employees, partners, and clients. Your trust, dedication, and passion have been the driving forces behind our evolution. Together, we have overcome challenges. We look to the future with great confidence, determined to build a sustainable and virtuous agricultural model aligned with the environmental and societal challenges of our time.

Let's continue to innovate and move forward together toward a greener and more prosperous future.

Innovation

DESIGN

Developed through direct exchanges between our design office and farmers, the design of our equipment addresses the concrete challenges encountered in the field. All designs are created internally using CAD software before proceeding to production. Convinced that agriculture will undergo profound transformations in the coming years, our equipment supports producers in their daily activities with a guiding principle : Quality, Productivity, and Respect for nature and people.

MANUFACTURING

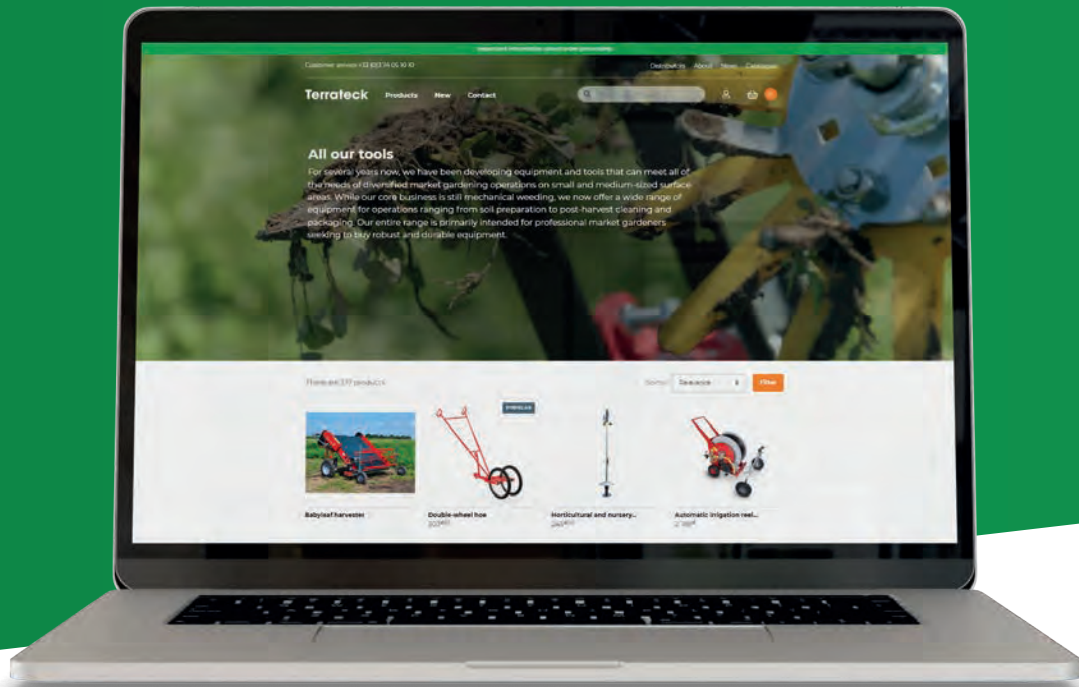

With a workshop equipped with a range of metalworking tools, Terrateck produces all its prototypes in-house. For machines manufactured in series, we collaborate with French and European subcontractors located near our borders. All assembly is carried out in our workshops to ensure optimal quality at delivery.

PROMOTION & MARKETING

We love the great outdoors and getting our hands dirty! Terrateck's presence in the field is a key element of its close relationship with producers. Numerous demonstrations and trade shows are held throughout the year to maintain constant contact with professionals. Sales are carried out directly or through a network of distributors at both national and international levels.

New **TERRATECK TOOL**

An excellence label serving market gardeners

In recent months, our product teams have worked tirelessly to source numerous new product lines from our partners to meet all your needs, making Ttrateck the central partner for your farming operations. To provide you with **clarity** and **transparency** about the products we offer, we are proud to introduce our new exclusive label: Ttrateck Tool ©.

This label highlights products **designed and manufactured by our in-house design office**, ensuring innovation and a close alignment with your needs.

The label's guarantees

A 100% controlled Ttrateck manufacturing process

Our teams of engineers and technicians design and produce each TT tool in our workshops to ensure optimal quality.

Innovation driven by your needs

TT products are the result of internal research and development, carried out in collaboration with professional market gardeners to perfectly meet field demands.

Eco-responsibility

True to our values, TT products prioritize durable materials and local subcontracting.

Immediate availability of parts

for After-Sales Service

A mark of trust and transparency

TT labeled tools are designed to provide you with a **warranty of quality** and **durability**, derived from our unique expertise. They ensure immediate recognition of their «100% Ttrateck» origin and **complete transparency** regarding the **sourcing and design of the products**.

The label for products **100% designed**

RIGID CHASSIS TILLER UNROLLER PAK-M-100 TYPE BCS New

Tarp tension	Adjustable	Required power	Min. 6,5 HP
Height	Adjustable	Number of positions	3
Weight	48kg	Roller width	60-100cm

This unroller is capable of supporting mulch rolls rowing from 60 to 100 cm in width. Its design allows for easy height adjustment through adjustable wheels and skids, ensuring optimal adaptation to your terrain. The roll holder support and the tensioner, adjustable in three distinct positions, provide additional flexibility to meet your needs. Attachment to cultivator type : BCS, Grillo, Ferrari...

N002250

TILLER WITH SHOCK ABSORBERS PAK-ME TYPE BCS New

Tarp tension	Adjustable	Required power	Min. 6,5 HP
Height	Adjustable	Shock absorbers	Yes
Weight	56kg	Roller width	80-100cm

The mulch layer is compatible with mulch rolls rowing from 80 to 100cm in width, and its height is easily adjustable thanks to its adjustable wheels and skids. This flexibility allows you to tailor the tool to your needs, ensuring precise and uniform mulch application.

N002251

MOUNTED MULCH UNROLLER PAK-120 New

Tarp tension	Adjustable	Weight	80kg
Max. speed	5-6km/h	Overlap	Adjustable shares
Hitching	3 pts (cat. 1 / 2)	Roller width	Max. 120cm

Equipped with a rigid fixed frame, the PAK-120 is designed to accommodate mulch rolls up to 120cm in width, with an optional extension up to 200cm available upon request. The working height is easily adjustable thanks to the adjustable wheels and shares, allowing for perfect adaptation to your land conditions.

N002252

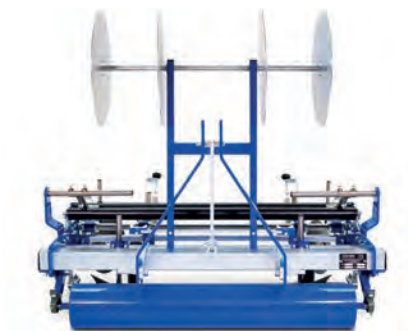

MULCHING UNROLLER PAK-R-120 SEMI-PRO New

Tarp tension	Adjustable	Weight	100kg
Max. speed	5-6 km/h	Overlap	Adjustable
Hitching	3 pts (cat. 1 / 2)	Roller width	Max. 120cm

The PAK-R-120 semi-pro model is an innovative mulch unroller compatible with all types of tractors. This unroller is ideal for medium-sized operations, covering more than one hectare, whether in open fields or greenhouses.

N002253

MULCHING UNROLLER PAK-E-120 PRO New

Tarp tension	Adjustable	Weight	180kg
Shock absorbers	Yes	Overlap	Adjustable
Hitching	3 pts (cat. 1 / 2)	Roll width	Max. 120cm

Designed to fit all types of tractors, it allows for quick and effortless installation, whether in the field or in a greenhouse. With its chassis equipped with shock absorbers, it ensures stable operation on all soil types.

CLOD PLANTER - 1 TO 3 ROWS (1 SEEDLING CUP PER ROW) New

Hitching	3 pts (cat. 1 / 2)
Planting distances	20 to 200cm
Number of cups	1 to 6 / unit
Planting depth	6cm
Soil blocks diameter	Max. 4/5cm
Min. inter-row distance	40cm (3 rows)

The mounted plug planter can be used on bare soil or on mulch. There is an option to attach this machine to a mulching machine, allowing for mulching and transplanting in a single operation. One or more operators can easily sit on the planter to place the plugs into the planting cups. This planter can be configured with one, two, or three planting

units to establish rows with variable planting distances rowing from 20cm to 200 cm (the distance can be adjusted using the included sprockets).

Each unit is standardly equipped with a single planting cup.

TOWED EBRA SEEDERS (1 TO 6 ROWS)

The EBRA seeder is a mechanical seeder with aluminium disk distribution. Simple, robust, and multi-purpose, it enables quality seeding for diversified vegetable crop operations. Thanks to its two large diameter wheels, it rolls over the earth smoothly

and will not pack it down as much. There is a range of seed discs for precisely sowing all types of seeds. The row density is adjusted with gear wheels that make it possible to regulate the seeder to the sown crop. These spreaders are available in 3 versions :

Essentiel, Dynamic and Expert, and from 1 to 6 rows.

Different options are available : rubber rear wheel, clod clearer iron, spreader seed boot, micro-granule applicators, fertilizers, etc.

WIZARD TOWED PNEUMATIC SEED DRILLS New

The Wizard mounted seeders are characterized by their adaptability and exceptional precision. They feature a pneumatic seed distribution system and a structure that allows for quick adjustments of seed type and spacing.

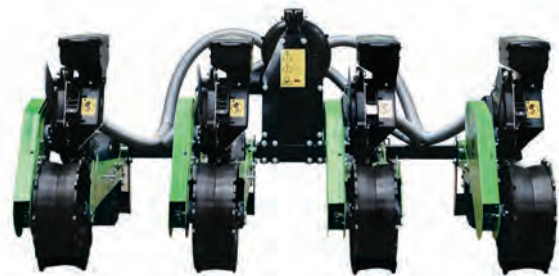

These seeders offer great versatility due to their low weight and a unique transmission

for each element. Simple and quick adjustments facilitate crop changes. The Wizard range has been developed to provide the maximum number of solutions in a single seeder, utilizing the same technology as large-scale seeders in a compact format for small-scale applications.

Furthermore, the wide selection of accesso-

ries allows for the customization of the seeders to meet different user needs and crop types.

The Wizard series is divided into three models: WZ-D / WZ-DS (for traditional field sowing), WZ-G (completely electric seeders), and WZ-F (for hill cultivation, narrow rows, and small seeds).

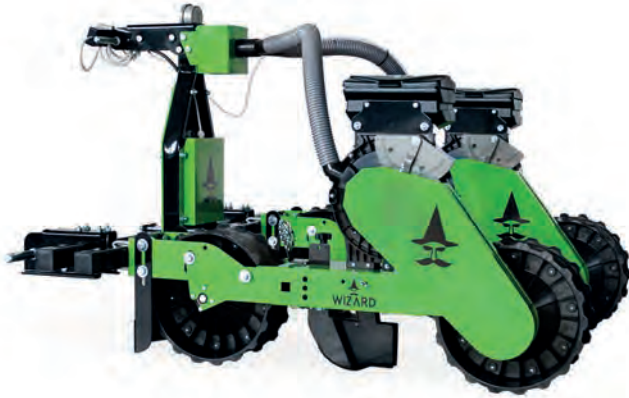

PRECISION PNEUMATIC SEED DRILL - WZ-D / WZ-DS RANGE

Number of rows	1 to 5 rows
Frame width	120 to 250cm
Required power	15 to 50HP
Hitching	3 pts (cat. 1 / 2)
Seed tank	3L
Inter-elements distance	Min. 25cm

The WZ-D and WZ-DS range includes seeders designed for small to medium power tractors (15-50 HP) and is suitable for traditional field sowing, ridge cultivation, small greenhouses, and all types of seeds. The DS series features the advantage of a SWITCH chassis that allows for quick and easy adjustment of row spacing using a lever. This enables even faster transitions between configurations! The WZ-D and WZ-DS can be customized upon

request with various configurations, tailored to specific production needs. It is possible to install between 1 and 5 units with a minimum row spacing of 25cm.

The standard configuration includes : a vacuum system, a parking device, clod breakers, a leveling wheel, a 3L seed tank, a furrow opener, a seed drop tube, and a sowing depth adjustment mechanism.

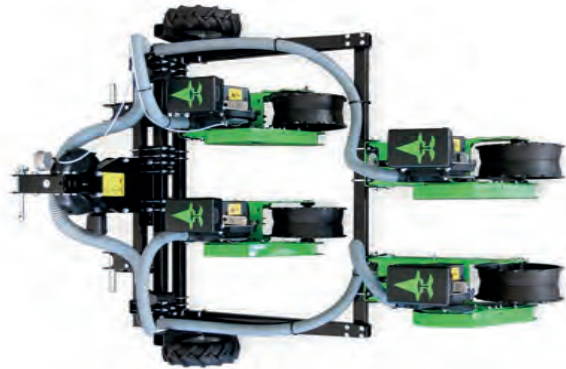

PRECISION PNEUMATIC SEED DRILL - WZ-G RANGE

Number of rows	1 to 4 rows
Frame width	120 to 160cm
Required power	15 to 25HP
Hitching	3 pts (cat. 1 / 2)
Seed tank	3L
Inter-elements distance	Min. 25cm

The WZ-G range includes fully electric seeders that can be connected to the tractor's battery or another power unit without the need for a power take-off (implement/tool carrier/robot). This range features a 12V single or double vacuum pump capable of powering from 1 to 4 sowing elements. In addition to the three-point hitch, it simply needs to be connected to the 12V battery of the tractor on which it is mounted. The seeder draws a reduced

amount of amperage during operation, with a maximum of 35A. The vacuum pump is controlled by a power unit with on/off functionality on the machine, and the power is regulated by a control unit on the tractor. Filter maintenance is quick and easy, requiring no tools. The vacuum control system can also be mounted on any type of additional frame, creating a precision pneumatic seeder suitable for various types of implement carriers.

PRECISION PNEUMATIC SEED DRILL - WZ-F RANGE

Number of rows	4 to 8 rows
Frame width	120 to 225cm
Required power	40 to 50HP
Hitching	3 pts (cat. 1 / 2)
Seed tank	3L
Inter-elements distance	Min. 12,5cm

The WZ-F range includes models designed for small to medium power tractors (40-50 HP).

These seeders are specifically tailored for ridge cultivation (thanks to adjustable-height side wheels), narrow rows, and small seeds. This series is equipped with 4 to 8 sowing units with a reduced and uniform row spacing.

These seeders can be customized upon re-

quest with various configurations, according to specific production needs.

The standard configuration includes: a vacuum pump, a vacuum gauge, support wheels (height adjustable up to 20 cm), clod breakers, a 3L seed tank, a furrow opener, a seed drop tube, and sowing depth adjustment.

RANGE DEDICATED TO POTATO / ONION PRODUCTION

The range of equipment offered by Terateck for potato and onion production enables intervention at every stage of cultivation. These tools are known for their manufacturing quality and technical so-

phistication. From planting to harvesting, including ridging and leaf crushing, this range meets all the needs for production on small to medium-sized areas. With these machines, it is possible to work on small

plots of land, mountainous terrains, hilly areas, and moderately sloped or difficult grounds.

POTATO HARVESTER - DM 50

The DM 50 potato harvester is the ideal tool for harvesting potatoes, tubers, garlic, and onions. Rear ejection for maximum efficiency.

N000849

POTATO HARVESTER - DM 100

The DM 100 potato harvester is the ideal tool for harvesting potatoes, tubers, garlic, and onions. It features lateral ejection.

N000827

POTATO HARVESTER-COLLECTOR «JUNIOR»

The potato harvester-conditioner has been designed to facilitate the harvesting of new and particularly delicate potatoes. The machine is of the towed type.

N001989

AUTOMATIC POTATO PLANTER

Designed for the needs of medium and large agricultural operations, these planters enable high-quality, rapid, and adaptive seeding across all types of terrains (elevation changes, soil types, etc.).

VIBRATORY ROLLER WITH RAMMERS

Ideal tool for removing weeds near crops (garlic, potatoes, onions) without damaging the cultivated plants and for compacting the soil, while creating clean and precise ridges.

POTATO HAULM SHREDDER

Ecological alternatives to the use of chemical defoliants in potato cultivation. These shredders are suitable for organic farming operations and operate optimally in ridge cultivation systems.

TOWED BRUSH WEEDER FOR PLASTIC MULCHING

Track width	1 to 2,20m
Mulching	Plastic/woven/biodeg.
Width	90 to 220cm
Brushes	3 hardness levels
Hydraulic	Single acting / Free return
Guidance	Manual rear or 3 pts

This weeding machine consists of a classic weeding machine chassis with manual steering, onto which hydraulic-driven rotary brushes are mounted on parallelograms to ensure the finishing of weeding at the edge of the plastic mulch. This brush is composed of different tiers of bristles to adjust the aggressiveness of the brush according to the thickness of the plastic mulch. These components have a significant range of

adjustments corresponding to the various practices of producers and the different machines used for the installation of plastic mulch. This weeder can be used on plastic, woven, geo-textile mulch, as well as on biodegradable mulch. It can be operated flat or on raised beds. Simply adjust the angle of the brushes to be parallel to the soil.

T000001

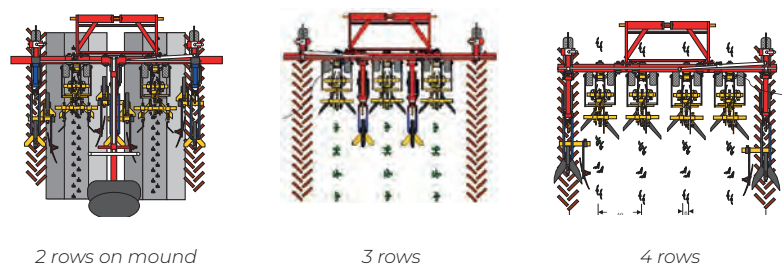

ARGUS MARKET GARDENING TOWED WEEDING MACHINE (FROM 1 TO 12 ROWS)

The ARGUS market gardening towed weeder mounted to the front or rear linkage gives the operator greater visibility of the work being done at the center of the hoeing elements in the ground. These very versatile hoeing machines can be customized and accessorized according to your crop plan and your soil. It is possible to adapt the various hoeing and ridging accessories...

DUO PRECISION MARKET GARDENING TOWED WEEDING MACHINE (FROM 1 TO 12 ROWS)

Mounted on a tool carrier at the rear, these «light» yet very robust cultivators are perfectly suited in terms of efficiency, productivity, and precision for mechanical weeding operations. The precision cultivators equipped with DUO parallelograms are particularly effective for sensitive sown crops such as carrots, beets, endives, turnips...

ROTARY WEEDING MACHINE ROTO'BINE (FROM 1 TO 3 ROWS)

Hitching	Standard 3 pts
Hydropower plant	Integrated (50L)
Rotor speed	Variable
Working depth	Adjustable
Teeth	Steel
Other equipments	Fine brushes/brushes

The Roto'bine weeder is a rotary weeding tool designed for wide-row crops (such as cabbage, beets, celery, and herbs). The two rotors, mounted on pivots, are guided by the operator seated at an elevated position. The overhead view of the seed line and the rotors allows for high-quality weeding at a lower cost (no cameras, sensors, GPS, etc.). A knob enables the adjustment of the rotation speed of the spindles to adapt to climatic

conditions and soil type.

The frame of the Roto'bine weeder is modular. It can be configured to accommodate 1 to 2 weeding stations for working on 1 to 2 rows of vegetables on a bed. This chassis can be supplemented with additional weeding components for inter-row cultivation.

MARKET GARDEN TOWED CAMERA WEEDING MACHINE

With this new range of guidance systems using a colorimetric camera, K.U.L.T. provides the best available technologies for ultra-precise hoeing (<1cm).

The sturdy frames are supported by disc wheels that stabilize the whole structure. Given that the camera can see the whole strip, it works on all market gardening crops as soon as the rows are clearly visible to the naked eye.

Thanks to an interface equipped with a 3-point linkage at the rear, you can modernise all your cultivators.

- **KULTiVision PV** for hoeing 1 to 3 strips or up to 4m, row spacing from 5cm, market gardeners love it.
- **KULTiVision SV** for large widths (4 to 12m) and very heavy machines, for large in-

dustrial crops and vegetables

- **KULTiSelect** is the in-row cultivator of the KULT range. Ideal for inter-plant hoeing for salads, cabbage, beets and other mini-clods.

Find out more

MULTI-CULTIVATOR HOEING MACHINE

The multi-cultivator hoeing machines with rotary harrows are machines that consist of a rigid tool carrier bar up to 4.60 meters wide. Additionally, they are equipped with hydraulic lifting extensions. Various widths of multi-

tines are mounted on this tool carrier to work between the rows of your vegetable or broad-acre crops. The covers of these tines are designed to prevent any projection onto the growing crops. The range of multi-tine

cultivators is divided into three series: the FL series (for light and sandy soils), the FP series (for medium/heavy soils), and the FPSR series (for heavy and stony soils).

FL RANGE

The FL model is designed for low-power tractors ranging from 15 to 40 HP. On this product, it is possible to mount 2 to 8 adjustable elements with spacing from 14 to 76 cm (between the rows).

FP RANGE

The FP / FPA / FPXA models are referred to as heavy multi-tines and are recommended for challenging work in heavy and stony soils.

FPSR RANGE

The FPSR / FPSRA / FPSRXA models, on the other hand, are classified as « super heavy » multi-tines and are recommended for very challenging work in extremely heavy and very stony soils.

TOWED MARKET GARDENING SPIKE HARROW

N000002

Working width	150cm
Teeth diameter	6/7mm
Teeth length	380mm
Teetch spacing	25mm
Teeth inclination	Adjustable

The tine harrow is a three-point mounted tool used in all vegetable crops.

With an operational speed of up to 12 km/h, the use of the tine harrow allows for the destruction of the majority of weed seedlings at early developmental stages. This tool is utilized for weeding through false sowing or on young seedlings. Weeds should be

at the filament/cotyledon stages. Tine harrows can be mounted on Category 2 rear-mounted tool carriers or on our Culti'rack tool carriers.

It serves as a complementary weeding method to inter-row cultivation. The gauge wheels ensure height adjustment for flat crops or raised beds.

MARKET GARDENING TOOL CARRIER CULTI'TRACK - A-SERIES (DIVERSIFIED MARKET GARDENING)

Yanmar 3-Cylinder Diesel engine	23 HP
Ventral/Rear lift capacity	300kg / 300kg
Track width	1,5 to 1,7m
Speed	400m/h (min.) - 5,9km/h (max.)
Hydraulic belly and rear lift	Hydraulic
Steering	Power steering

The self-propelled tool carrier is a compact 23 HP model designed for diversified vegetable farming on small to medium-sized farms, featuring a chassis smaller than that of the E-series.

The advantage of the A-Series: a lightweight tool carrier with lifting capabilities that can accommodate short tools due to its distance between the lower wheels.

MARKET GARDENING TOOL CARRIER CULTI'TRACK - E-SERIES (FIELD VEGETABLES)

Yanmar 3-Cylinder Diesel engine	25 HP - 35 HP
Ventral/Rear lift capacity	800kg / 300kg
Track width	1,5 to 1,8m
Speed	400m/h (min.) - 5,9km/h (max.)
Hydraulic belly and rear lift	Hydraulic
Steering	Power steering

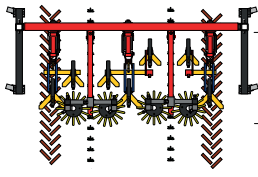

Thanks to its chassis, it offers a greater loading capacity and the ability to accommodate long tools. The E-series comes in two engine options to meet your specific needs : 25 HP and 35 HP.

The advantage of the E-Series : these tool carriers feature a hydraulic system that integrates reducers within the wheels. As a result, the machine offers greater torque while being more energy-efficient.

E-WEEDMASTER - VERSATILE ELECTRIC CARRIER FOR MARKET GARDENING New

Battery	2 batteries (12V)
Autonomy	2 to 4h
Power	2 x 250W
Max. track width	150cm
Working width	80 to 120cm
Weight	89kg

The E-Weedmaster combines the simplicity of a push hoe with the power of a versatile electric tool carrier. It is an excellent solution for small vegetable farms looking to enhance daily working comfort through electric advancement while maintaining precision in their work. The E-Weedmaster is designed to operate on beds ranging from 80 cm to 120 cm wide (maximum wheel center-to-center distance : 150 cm). It will assist you in all operations,

including sowing, weeding, harrowing, and harvesting. The two « triggers » allow for independent control of the right and left wheels to ensure you stay straight on your beds. The tools of the E-Weedmaster can be attached and detached very quickly. They connect to a complete tool bar to avoid wasting time on adjustments.

GLIDER 200 - ELECTRIC PICKING ASSISTANT New

The Glider 200 Terrateck is a work assistance equipment designed to support individuals in an ergonomic position for manual weeding and planting operations. The 200 version is an economical model for producers working on small plots who seek equipment with the best Quality/Price ratio. The Glider 200 is a lightweight, maneuverable,

cost-effective, and quiet tool that can be used in greenhouses as well as in open fields, making it ideal for crop monitoring. This model is equipped with a small 24V battery pack that provides an autonomy of 2 to 4 hours (depending on weather conditions, the number of individuals lying down, and terrain type). Like the Glider 500

and 2000, it features the Ergo+ beds from Terrateck. As standard, it is delivered with one bed, and a second bed can be adapted based on the width of your beds and the desired number of operators (maximum of 2).

GLIDER 500 - ELECTRIC MULTI-PURPOSE CARRIER

The Glider 500 Terrateck is a labor-assist equipment designed to carry individuals in an ergonomic position for manual weeding and planting operations. In response to producers' requests, we have developed a carrier that meets the demands of the most rigorous growers. This lightweight, maneuverable, economical, and silent equipment

can be used in greenhouses as well as in open fields, making it ideal for monitoring crops. It is equipped with a standard battery pack that provides a runtime of 6 hours (depending on weather conditions, number of individuals lying down, and terrain type). This lightweight carrier is available with the optional Ergo+ beds from Terrateck, which

ensure proper support for the shoulders and torso, and are 100% suitable for both men and women through a dual-bench ergonomic system that does not exert pressure on the chest.

GLIDER 2000 - ELECTRIC TOOL CARRIER FOR MARKET GARDENING

Working height	Adjustable
Battery	Lead (5h autonomy)
Number of users	1 to 6 users
Track width	1,50 to 1,80m
Speed	0 to 3km/h
Noise level	0 dB

The Glider 2000 Terrateck is a versatile electric tool carrier designed to perform the following functions: weeding bed for 2 to 6 rows, harvesting assistant for vegetable crops accommodating 2 to 4 operators, planting assistant for 2 to 4 operators, superficial soil cultivation and hoeing in a reclining position, as well as transport and handling... Used from sowing to harvest, this electric tool carrier is a multifunctional piece of equipment that is ideal for superficial

tasks requiring precision and ergonomic operation. In response to producers' requests, we have developed a carrier that meets the demands of the most rigorous growers. It is a robust, maneuverable, economical, and quiet piece of equipment suitable for use in greenhouses (with a mandatory crop support height of 2.30m) as well as in open fields.

SELF-PROPELLED FERTILIZER APPLICATOR FOR MARKET GARDENING / NURSERIES

Power supply	24V battery
Fertilizer type	Pellets, prills, granules
Not suitable for	Powdered fertilizers
Fertilizer dose	50 to 1000kg/ha
Widths	90 / 120 / 150 / 170cm
Track widths	120 / 150 / 180 / 200cm

The electric self-propelled fertilizer spreader Terrateck has been designed for a specific application of localized fertilization in market gardening and nursery operations on beds. This spreader features a hopper that accommodates all types of fertilizers: pellets, prills, granules, etc., except for powdered fer-

tilizers. Distribution is carried out using rotors equipped with grooves to precisely meter the applied fertilizer. The width and depth of the rotor grooves can be adjusted according to the desired fertilizer application rate (ranging from 50 kg/ha to 1000 kg/ha).

EZY-PLANT - ELECTRIC SOIL CLOD TRANSPLANTER New

Number of rows	1 to 12
Autonomy	From 6 to 10h
Track widths	120 / 150 / 180cm
Speed	0,4 to 8,4m/min
Planting distances	Variable
Dimensions	250x160cm

The EZY-Plant electric plug planter represents THE compact solution, combining high operational throughput, excellent maneuverability, remarkable ease of use, and above all, unparalleled work ergonomics compared to manual planting, all while generating no noise. Primarily designed for small to medium-sized market gardening operations,

this planter is set to revolutionize your daily activities as a market gardener ! The main strengths of the EZY-Plant plug planter include :

- Its fully electric drive system,
- Its variable row and inter-row configurations,
- Adjustable planting cadence settings,
- Significant operational autonomy.

TWINER (HANDLE KNOTTER FOR STAKING CULTURES)

Handle included	No
Type of knot	Simple
Knotting duration	4-6 seconds
Compatibility	All type of twines
Weight (S version)	460g (without Handle)
Weight (L version)	740g (without Handle)

The Twiner is a manual tool that allows you to easily and quickly tie knots on your crop supports.

This handheld knotter can be used with any type of twine (sisal, biodegradable, coconut, polypropylene, etc.).

Time required to tie a knot: 4 to 6 seconds.

The Large model is particularly suitable for outdoor hop cultivation, accommodating thicker twine.

CAMPAGNOLE (COUNTER-TEETHED TIPPING FORK)

Teeth material	Hardened steel
Available widths	50 / 80 / 100cm
Number of teeth	5 / 8 / 12
Working depth	24cm
Inter-teeth spacing	10cm
Handle length	120cm

The Campagnole is a soil cultivation tool originally designed for market gardeners. It is a fork for digging (or rather a grelinette) that is articulated, allowing for the loosening and breaking up of clods of soil. Equipped with counter teeth, the user drives the teeth of the «classic» grelinette into the ground, and during the backward movement of the handle,

the soil breaks against the counter teeth, enabling finer work on the soil without dispersing it beyond the cultivation bed. Thus, on the Terrateck Campagnole, there is a double row of teeth of varying lengths that facilitate the tool's penetration into the soil and ensure the breaking of clods throughout the entire working depth of the tooth.

5 teeth N001039

8 teeth N001040

12 teeth N002616

GRELINETTE (FORK FOR DIGGING)

Teeth material	Hardened steel
Number of teeth	From 3 to 8 teeth
Inter-teeth spacing	110mm
Total tooth length	245mm
Reinforcement length	60mm
Handle included	Yes

The grelinette (or Biogriffe) penetrates vertically and deeply into the soil thanks to its hardened steel tines with just a simple push of the foot. It is then sufficient to pull backward while making left-to-right movements to break up clumps. The grelinette has the advantage of preserving the organization

of the various microbiological layers of your soil. In this way, organic matter is transformed into nutrients that will be assimilated by your crops.

The advantage of the Terrateck grelinette : Each tine is reinforced with a 60mm support at its base.

MANUAL MULCH UNROLLER

Roller width	90 to 160cm
Roller mounting	On springs
Tarp tension	Tiltable wheels
Overlap	Adjustable discs
Weight	44kg
Handle height	Adjustable

The manual plastic/biodegradable mulch layer is a tool designed to facilitate and enhance the efficiency of mulch application operations on soil. Fully adjustable, this layer can accommodate rolls with a width ranging from 90 to 160 cm. The tool is operated by two operators pulling the layer. The plowshare at the front of the tool allows for soil opening and the creation of a furrow, enabling the mulch roll to be unrolled,

pressed, and tensioned at the bottom of the furrow using the wheels. The parabolic discs located at the rear of the machine help to cover the edges of the tarp with soil. The drip tape holder unwinds the tubing as the mulch tarp is laid down. This tool is ideal for use in greenhouses or open fields.

T000035

NETTING REEL / UNREEL New

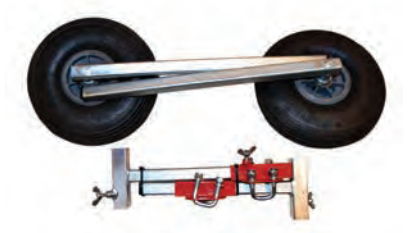

Roller width	165cm
Tube diameter	14cm
Number of rolls	5
Max. load capacity	120kg
Roll-up length	100m
Weight	75kg

Facilitate the winding and unwinding of your tarps and nets while saving valuable time. This net roller allows for the winding/unwinding of 100 meters per roll in just a few seconds, thanks to its ergonomic crank handle, and features a unique «un-wrinkling» system that removes creases during the winding process. It has a winding width of 165 cm on a removable tube with a diameter of 14 cm, which can be disas-

sembled without tools. It is possible to store 5 empty tubes directly on the wheelbarrow. The wheel track width from center to center is 110 cm, enabling you to straddle your vegetable beds.

Compatibility: P17 films, woven mulch films, plastic tarps, nets.

MULCHING THERMO-PERFORATOR

Height	90cm
Gas consumption	250ml/h
Gas	Propane / butane
Weight	1,6kg
Warranty	2 years (excluding piezzo)
Packaging	No cup, no gas

The Access Burner is a thermal weeder designed for localized weed control through combustion. When combined with a base and a cup, this torch transforms into a perforator for plastic or woven mulch films. It will perforate your woven or plastic mulch upon direct contact. With woven mulch, regardless of thickness, the Thermoperfo allows for quick and clean perforation, thermally welding the plastic during the operation. This perforator can be used in all weather conditions;

no climatic factors deter its performance! It is powered by a gas cylinder, with autonomy varying based on weather conditions and the diameter of the cups used. A 600ml gas cylinder provides between 1.5 to 3 hours of operational autonomy. Delivered without cup or gas.

HORTICULTURAL AND NURSERY MULCHING PERFORATOR

Height	95cm
Temperature	1 800°C
Gas consumption	0,9 to 1,5kg/h
Weight	2,4kg
Regulator	Included
5m hose	Included

This mulch perforator consists of a thermal weeding lance and a base on which it is necessary to mount a cup corresponding to the desired drilling diameter. It provides a clean and precise perforation that also allows for hot welding of the mulch for optimal results. The perforator is powered by a propane/butane gas bottle (not included). It is compatible with all market bottles in sizes of 3kg, 5kg, or 13kg. It is advisable to use this

perforator with smaller bottles carried in a shoulder strap or backpack for optimal working comfort. This perforator is well-suited for horticulturists and landscapers. Note : this model is not compatible with the cups and accessories of the market gardener perforator T000373 ! Delivered without cup or gas.

ROTATING PERFORATOR FOR NATURAL MULCH

Cup diameters	80mm / 114mm	Perforation	All types of natural mulch
Powered by	Screwdriver	Sold	Without cup
Rotation speed	800 rpm	Screwdriver	Not included

This rotary perforator mechanically creates holes in mulch materials such as hemp, coconut, jute, and sheep wool. This mulch perforator is powered by a drill to ensure the rotation of a bell that cuts through the mulch by means of friction.

MANUAL TAPE&TAG APPLICATOR New

Roller diameter	76mm (standard)
Fixed mounting	Wood screw (Ø4/5)
Screw (fixed mount.)	Non-included
Screw (mobile mount.)	Included
Min. table thickness	5mm
Max. table thickness	50mm

The Flortill tape applicator for Tape&Tag label holders is an innovative piece of equipment that enables the application of a Kraft adhesive tape on both sides of the label holder.

This adhesive tape, specifically designed to withstand moisture and UV exposure, allows for clear and legible annotation of your nursery plantings thanks to its writing lines.

The Tape&Tag system is unique in its kind, as it facilitates the application of a reusable adhesive strip on all Tape&Tag label supports throughout successive crop cycles.

The tape applicator needs to be secured to a table using the included thumb screw clamp.

MANUAL SEEDER FOR CELL PLANTER TRAYS

Weight	260g
Distribution	Rotary disc
Discs provided	XS, S, L, XL
Antistatic	Yes
Plates (n. of pots)	From 128 to 448
Seed type	Coated

Your seedling of cell trays has never been easier than with the manual seeder T8/T12. Fast, efficient, and precise, you can perform your seeding operations by simply sliding the seeder over each row of cells in your trays.

Cup by cup, the seeder accurately dispenses one seed at a time. The seeder ensures a ro-

tary distribution of one seed per cell (or cup). It comes with 4 different discs to accommodate various seed sizes.

It is important to note that the seeds must be coated (round) to ensure optimal operation of the seeder.

LEEK PLANTER

Teeth material	Steel	Teeth diameter	25mm
Spacing	3 x 230mm	Teeth height	220mm
Ajustable distance	80 to 180mm	Handles	Included

This leek planter allows the creation of uniform holes in terms of depth, spacing between rows, and inter-plant distance. To create the hole that will accommodate the leek, simply hold the planter with both hands and push it into the soil using your foot. An adjustable gauge enables the management of the distance between plants.

PAPERPOT TRANSPLANTER - PL4

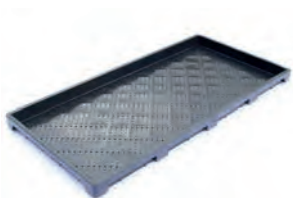

Yield	264 clods in 40 sec.
Working depth	Adjustable
Length	1m70
Width	35cm
Weight	21kg
Warranty	2 years

Plant your plugs quickly and easily! The Paperpot planting system is a well-known and recognized equipment in Japan and the USA for its efficiency and simplicity in planting. Sowing is carried out in trays with paper cells that are interconnected. Planting is then executed rapidly by simply «unrolling» the string of seedlings into the soil. After harvesting, the remaining paper in the soil decomposes to make way for the next

crop. Planting must be performed using the specific cell system designed for this equipment (chains). The machine should be operated in a pulling direction. To complement your transplanter, various accessories are available: seeders, seed trays, sowing plates...

MULTI-ROW MARKET GARDEN SEED DRILL - PL5

tt T000058

Number of rows	1 to 12 rows
Hopper	Independant hopper
Inter-row distances	5 to 70cm
Speed	1 to 3km/h
Weight	34kg
Warranty	2 years

The 12-row vegetable planter is designed for diversified market gardening operations. A central rotating shaft drives the seeds towards a perforated plate that releases the seeds one by one. The seeding density is proportional to the forward speed and adjustable through a set of gears. This planter is perfectly suited for sowing arugula, radishes, spinach, and lamb's lettuce. Easy to use, it can be adjusted in just a few minutes.

Dimensions	30x31x18cm	Weight	1,8kg
Color	Black	Warranty	2 years

An essential accessory for optimizing your agricultural operations. Specifically designed for the Earthway manual seeder, this spreader allows for the simultaneous distribution of fertilizers while sowing in a single pass, thereby saving you valuable time.

N003042

SPREADERS FOR FERTILIZERS AND SEEDS (MANUAL SEEDER 1001-B) New

Material	Plastic	Radius	From 2 to 4,5m
Color	Red	Capacity	18kg (3100) / 11kg (2750)
Harness/strap	Adjustable	Warranty	2 years

These spreaders are the quintessential professional tools for applying granular fertilizers or sowing crops in hard-to-reach areas. Whether on uneven terrain, in wet zones, or along roadways, they ensure optimal performance where others fail.

2750 (nylon-made / on shoulder) N003043

3100 (crank spreader) N003044

MANUAL 1-ROW SEEDER - JP1

Roller	Anti-static	Sowing depth	Adjustable
Sowing method	Inline or clumped	Overlap	Adjustable
Hopper	Transparent/removable	Roller included	No

Designed by field engineers for sowing areas of approximately 2000m² per day, it is ideal for market gardeners, landscapers, and both amateur and professional gardeners. The JP-1 provides an excellent return on investment for both professionals and hobbyist gardeners.

N000886

MANUAL 3-ROW SEEDERS - JP-3 & JP-3R (JP-3 REINFORCED)

Roller	Anti-static	Sowing depth	Adjustable
Sowing method	Inline or clumped	Overlap	Adjustable
Hopper	Transparent/removable	Roller included	No

Designed on the same operational principle as the JP-1, it is ideal for organic vegetable growers looking to sow from 0.2 to 2 hectares of vegetables. It can also be used for sowing aromatic plants, flowers, or other vegetation in the context of landscaping projects.

MANUAL 6-ROW SEEDER - JP6

Roller	Anti-static	Sowing depth	Adjustable
Sowing method	Inline or clumped	Overlap	Adjustable
Hopper	Transparent/removable	Roller included	No

The JP-6 vegetable seeder has been developed based on the same operational principle as the JP-1/JP-3. It is ideal for organic vegetable growers looking to sow from 2 to 5 hectares of crops per day. If your planting bed is wide, utilizing the JP-6 as a three-row seeder may be a more effective solution than using the JP-3.

EBRA SEED DRILL RANGE

The EBRA is a mechanical, single-row, push-type seed drill. Simple, robust and versatile, it is ideal for diversified market gardening operations.

Thanks to its two large-diameter wheels, rolling is easy, and soil compaction is reduced. The numerous possibilities for adjusting the drive (19 positions) mean that seeding is always proportional to forward speed.

The special feature of EBRA seeders is the seed distribution system. There is a wide range of seed distribution discs for precise seeding of all types of seed. To disengage the seeding control, simply tilt the seed drill backwards to raise the front wheel driving the distribution block.

SIMPLE WHEEL HOE

T000324

Length	135cm
Width	50cm (arms)
Height	Min. 80cm / Max. 110cm
Weight	7,5kg
Warranty	2 years
Tools included	None

The Terrateck market gardening hoe is a versatile soil cultivation tool for market gardeners and horticulturists. It allows you to mechanize your tasks such as seedbed preparation, weeding, hoeing, and ridging with ease. A complete range of tools is available to simplify your daily crop maintenance activities. Our mounting system enables you to quickly attach various tools.

DOUBLE WHEEL HOE

T000371

Length	135cm
Width	28cm (wheel to wheel)
Height	Min. 80cm / Max. 110cm
Weight	9kg
Warranty	2 years
Tools included	None

The market gardening hoe: an ancestral tool, already utilized by our great-grandparents, which clearly demonstrates its effectiveness ! The hoe has been redesigned by our engineering office to meet the demands of diversified market gardening.

The chassis is compatible with all types of tools, making it a versatile and highly practical element for soil cultivation ! From a simple

hoe to a double-wheel hoe, you can adapt it with a two-wheel kit for working with seedlings less than 15 centimeters, the installation of offset arms, the mounting of secondary tools, and numerous essential components to meet the requirements of diversified market gardening.

Range of accessories available p.70 / 71 >

SCALP COM HOE

Length	135cm	Weight	8kg
Width	Min. 38cm / Max. 48cm	Handles	Wood
Height	Min. 80cm / Max. 110cm	Tools included	None

The SCALP COM hoe is designed to operate in areas where other tools cannot access. It proves to be particularly effective for weeding in cemeteries (between graves), sidewalks, gutters, and similar spaces.

T000356

TINE HARROW HOE

Width	79cm (Tine harrow)
Amount of springs	36
Weight	25kg

HEAVY SPRING KIT (X36)
T000350

The tine harrow allows for weeding at the filament/cotyledon stage on young seedlings. This equipment also enables false seedbed preparation over a width of 80cm. Unlike a thermal weeder, the tine harrow does not induce germination through thermal shock.

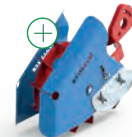

T000321

SIMPLE (S) & DOUBLE (D) WEEDING WHEEL FOR MARKET GARDENING

Blade material	Hardened steel
Wheel	Ball bearing
Height	4 adjustable positions

PROTECTIVE COVER
T000090

This tool consists of a wheel and a weeding blade positioned at the rear. The wheel helps to press down unwanted weeds while the blade cuts them cleanly below the soil surface. The hardened steel blade is adjustable in both angle and height.

WOODEN HANDLE

Arm	Conical round	Diameter	28mm
Material	Wood	Weight	1kg (155cm) / 1,15kg(180cm)
Treatment	None	Terrateck marking	Red

These wooden handles are manufactured in France and are well-suited for all our Terrateck hand tools. They are durable, lightweight, ergonomic, and comfortable to use.

155cm T000149

180cm T000151

WOODEN HANDLE WITH T-GRIP

Arm	Conical round	Diameter	28mm
Material	Wood	Weight	1kg (155cm) / 1,5kg(180cm)
Treatment	None	Terrateck marking	Red

These wooden handles are designed with a «T» grip and are compatible with all our Terrateck hand tools. They provide an excellent grip! Your pushing force is optimized, making them ideal for off-set work.

155cm T000150

180cm T000152

27CM WOODEN HANDLE

Arm	Conical round	Diameter	30mm
Material	Wood	Length	270mm
Treatment	None	Weight	170g

Short wooden handle, 27cm long. Ideal for exerting force to uproot thistles, brambles, etc. This handle is also useful for weeding in a weeding bed. Lightweight, comfortable, and durable: provides an excellent grip!

T000153

ERGONOMIC HANDLE FOR WOODEN SHAFTS

Material	Polypropylene	Left-handed	Yes
Resistance	UV, humidity	Fixation	Universal
Right-handed	Yes	Handle diameter	28mm

Developed by our research office and the result of close collaboration with designers and ergonomists, the Terrateck ergonomic handle is designed to fit our entire range of hand tools. It perfectly conforms to the shape of your hand, whether you are right-handed or left-handed, and will become an indispensable accessory for tackling long hours of manual weeding.

T000540

NIFTY WIRE - HAND WEEDER New

Material	Steel wire
Wire shape	Round
Available widths	40 / 60 / 90 / 120cm
Handle	Grip
Color	Orange
Weight	200g

The Nifty weeding tool range has been developed to make manual weeding tasks more ergonomic and precise. The blades, made of steel, are specifically designed to avoid damaging the root system of the crop during weeding operations. The Nifty Wire weeders combine the ergonomics and comfort of the Nifty range with the precision of a wire

hoe. This range will be ideal for interventions at the cotyledon filament stage, both between rows and within rows. The round wire will allow for meticulous work close to the plant, effectively targeting weeds without risking injury to the vegetable.

FARMERS FRIEND THERMAL WEEDER

Working width	80cm / 120cm
Material	Aluminium / Inox
Number of burners	5 / 8
Burners height	Adjustable
Handle height	Adjustable
Weight	11 / 18kg

Terrateck, the exclusive importer of Farmers Friend products, offers high-quality thermal weeders designed for professionals.

Using 13kg gas bottles, you can perform thermal shock weeding in post-sowing / pre-emergence on vegetable beds. The height of the burners and the handle are

adjustable to accommodate your beds and your physical stature. The offset handle allows for comfortable operation without stepping on the beds. Additionally, the path of the thermal weeder is also adjustable.

80cm N000173

120cm N000174

PRECISION DISC THERMAL WEEDER

Gas	Propane
Consumption	6 700g/h (to 4 bars)
Regulator	Not mandatory
Pipe length	1,5m
Disc diameter	350mm
Disc spacing	150 to 350mm

The Terrateck precision thermal weeder ensures weed control using an open flame, allowing for the elimination of weeds without resorting to chemical products.

Terrateck has developed a frame-mounted system that enables precise operation in inter-rows without damaging the existing crop. Equipped with two adjustable discs (ranging from 125mm to 350mm) via butter-

fly screws, you can perfectly adjust the working width to the centimeter to align with your inter-row spacing. The thermal weeder features a trigger that activates the «booster» during weeding operations and allows the weeder to remain in standby mode while transitioning from one bed to another.

REEL / UNREEL FOR DRIP IRRIGATION HOSE

Drum diameter	670/550/440/370mm
Max. hose diameter	32mm
Adaptive drum	Yes
Drum	Adjustable (4 positions)
Weight	31kg
Warranty	2 years

The irrigation hose reel/unreeler facilitates the reuse of irrigation tubes such as T-tape, polyethylene, or PVC. The patented retractable drum system allows for the removal of the formed coil without distortion. This enables you to store your irrigation tubes during the winter season and reuse them for several years. During the unrolling operations of the irrigation

hoses, you simply need to reposition the coil on the reel drum, which will ensure tension through a spring mechanism. This makes the unrolling process easier in the field. This winding cart provides comfort during storage operations while optimizing the storage of your irrigation tubes.

RANGE OF TERRATECK CARTS & WHEELBARROWS

Essential for any vegetable farm, wheelbarrows are crucial equipment that ensures quick, smooth, and optimal transportation of crates, tools, or any other necessary materials, whether in the fields, in the workshop, or in the greenhouse. Terrateck wheelbarrows are distinguished by a careful design, where every detail is considered to provide a

robust structure and high-quality materials, thus ensuring great rigidity and resistance to all challenges when transporting heavy or bulky loads. Available in manual and electric versions, this equipment meets a multitude of needs, allowing for maximum efficiency while reducing physical effort. The range of Terrateck wheelbarrows and carts

offers a wide variety of sizes and dimensions, perfectly adapting to all contexts of use: in the open field, in the greenhouse, in a warehouse, or within a workshop. The components are detachable and replaceable according to needs, making the range fully modular.

SIMPLE KIT ELECTRIC MARKET GARDENING WHEELBARROW

Battery	12V / 20Ah	Speed (Max. load)	3,5km/h
Autonomy	Approx. 4h	Speed (Empty)	5km/h
Motor power	250W	Fuse	40A removable

This is a handling equipment designed for loading plant crates, cases, harvest crates, etc. This electric version is based on the same foundation as the manual version, adding a powerful motor that allows you to transport a load of 120kg effortlessly while benefiting from an autonomy of 4 to 6 hours.

100cm T000632

120cm T000633

DOUBLE KIT ELECTRIC MARKET GARDENING WHEELBARROW

Battery	12V / 20Ah	Speed (Max. load)	3,5km/h
Autonomy	Approx. 4h	Speed (Empty)	5km/h
Tracks (wheel centers)	80cm	Fuse	40A removable

The double-wheel chassis ensures great stability for transporting heavy or bulky loads. The operator does not have to control the balance left/right on uneven terrain. This wheelbarrow has been developed to carry up to 4 rows of vegetable crates measuring 60x40cm.

100cm T000635

120cm T000636

SIMPLE KIT ELECTRIC MULTI-PURPOSE CART

Battery	12V / 20Ah	Speed (Max. load)	3,5km/h
Autonomy	Approx. 4h	Speed (Empty)	5km/h
Motor power	250W	Fuse	40A removable

The handling cart has been specifically designed for the transport and handling of heavy loads in stabilized spaces (warehouse, store, conditioning room). The two swivel rear wheels combined with an electric wheel at the front offer exceptional maneuverability.

100cm T000637

120cm T000638

160cm T000639

DOUBLE KIT ELECTRIC MULTI-PURPOSE CART

Battery	12V / 20Ah	Speed (Max. load)	3,5km/h
Autonomy	Environ 4h	Speed (Empty)	5km/h
Tracks (wheel centers)	80cm	Fuse	40A removable

Thanks to the disengageable motor, the electric carts can be used in «manual» mode. The two swivel rear wheels combined with two electric wheels at the front provide perfect stability even for transporting heavy loads.

120cm T000641

160cm T000642

SIMPLE KIT MANUAL MARKET GARDENING WHEELBARROW

Tray width	67cm	Tray	Modular
Tray length	100 / 120cm	Weight	21,5 / 22,7kg
Handles	Ergonomic	Warranty	2 years

With a load capacity of 120kg, it will find its application on your farm. This wheelbarrow has been developed for transporting two or three rows of vegetable crates measuring 60x40cm.

MANUAL MULTI-PURPOSE TIPPING CART IN KIT

Track (wheel centers)	65cm	Bin	Double-walled
Capacity	300L	Handles	Ergonomic
Bin material	Polyethylene	Warranty	2 years

The handling cart has been specifically designed for the transport and handling of heavy loads in stabilized spaces (warehouse, store, conditioning room). Its 35mm square tube chassis ensures rigidity and robustness during heavy load transport operations.

Fixed T000630

Tipping T000631

MANUAL MULTI-PURPOSE CART IN KIT

Track (wheel centers)	65cm	Handles	Ergonomic
Tray width	300L	Bin material	Polyethylene
Tray length	100 / 120 / 160cm	Weight	38 / 39,2 / 41,3kg

The handling cart has been specifically designed for the transport and handling of heavy loads in stabilized spaces (warehouse, store, conditioning room). Its 35mm square tube chassis ensures rigidity and robustness during heavy load transport operations.

100cm T000384

120cm T000385

160cm T000386

VERMONT CART

Capacity (volume)	300L / 80 gallons	Wheel diameters	680mm
Capacity (weight)	80kg	Track (wheel centers)	100cm
Bin dimensions	980x810x400mm	Tire width	65mm

Thanks to their specific design, the Vermont Carts allow the user not to carry the load. It is enough to manage the balance point of the cart, which, thanks to its large wheels, can transport light to medium loads.

F000025

TERRATECK WAGON CART New

Use	Harvesting, washing, transport	Inner bin dimensions	1100x698x197mm
Crate volume	154L	Max. load	250kg
Crate material	High density polyethylene	Handle	Soft grip

Its robust construction in steel and its high-density polyethylene body guarantee exceptional resistance to the elements and for intensive use. This cart is ideal for transporting heavy loads of up to 250kg over rough terrain.

T000922

ALL-PURPOSE HARVEST CART FOR CRATES

Material	Steel	Width	450mm
Color	Red	Crate size	50x30cm / 60x40cm
Weight	2,97kg / 3,11kg	Warranty	2 years

This is not a vegetable wheelbarrow, but a small all-purpose crate cart that can navigate through tight spaces, particularly during harvesting and planting, while carrying your crates. It can stack three harvest crates.

SACS ET SEAUX

Our range of bags and buckets is specially designed to ensure the harvesting and transport of vegetable, fruit, and flower crops, with a focus on ergonomics, robustness, and pro-

ductivity. Terrateck's side and belly harvesting bags offer optimal comfort to the user due to the balanced distribution of weight on the shoulders, allowing for hands-free

work. The flower buckets are designed for professional use, facilitating the harvesting, transport, and marketing of flowers.

BABYLEAF ELECTRIC HARVESTER

Length	200cm
Width	143cm
Cutting width	45/90/120/150/170cm
Weight	167kg
Charger	Optional

Harvest your daily needs in complete autonomy without fatigue! The Terrateck micro-greens harvester allows you to harvest salads, mesclun, purslane, spinach, etc.

The double-blade cutter provides a clean and precise cut of the vegetation. The deflector and the cutter are adjustable based

on the height of the vegetation, the height of the bed, and the desired cutting height. This harvester will impress you with its ease of use, ergonomic design, and working speed. A 60-meter bed can be harvested in approximately 12 minutes.

MINI BABYLEAF ELECTRIC HARVESTER (80CM)

Cutting width	80cm
Track (wheel centers)	97cm
Yield	160kg/h
Screwdriver rotation	1 300 rpm
Warranty	2 years

Based on our RJP harvester shown here, this equipment has been simplified to offer a harvester that is suitable in terms of sizing and price. The entire control system of this harvester is operated by a drill / driver, which ensures the operation of the cutter, deflector, and collection conveyor. Maneuverable and lightweight, this mini harvester will allow

you to harvest all types of cut salads, spinach, mesclun, purslane, etc. All components (cutting height, deflector, and conveyor) are adjustable to adapt to the growth stage and the crop being produced.

FIXED-POSITION HARVESTER FOR MICROGREENS & AQUAPONIC CROPS

Dimensions	400x150x190cm
Power supply	24V - 43Ah
Autonomy	5h (default battery)
Cutting height	60 to 220mm
Conveyor speed	0 to 4,5m/min

Motorized harvester for the harvesting of aquaponic crops or microgreens. The main conveyor facilitates the transport of trays and rafts (600mm wide) to a cutting blade (with adjustable cutting height). Once the crop is cut to the desired height, the second conveyor transports it directly into crates. The table is equipped with lockable swivel

wheels for maneuvering on flat terrain, ideally a concrete surface. The harvester can be operated by two operators to move the harvesting machine close to the tanks and crops. There is a storage area for placing harvest crates or for storing harvested crop trays.

T000724

EZY-BOTTE ELECTRIC HARVESTER FOR AROMATICS New

Cutting height	0 to 40mm
Autonomy	4 to 8h
Number of rows	1 to 7 rows
Speed	0,6 to 21m/min
Steering	Joystick

The EZY-Botte is the ideal ally for producers of leafy vegetables and herbs. These innovative machines combine cutting and bundling in one single pass, providing a significant time savings. Designed to meet the needs of vegetable growers, the EZY-Botte stands out for its ease of use, careful ergonomics, and speed of operation. Thanks to its intuitive

design, even novice users can quickly become familiar with the device, ensuring quality harvesting while preserving the harvested products. A true asset for professionals in the industry, who seek performance and reliability in their work.

FARMERS FRIEND QUICK CUT BABYLEAF HARVESTER

Cutting width	45cm
Yield	80kg/h
Screwdriver	Not included
Weight	3kg
Warranty	2 years

Powered by a cordless drill / driver, this harvester features a serrated blade that ensures a clean and precise cut of the harvested crop. This leaves behind a clean crop for a potential second cut. The woven macramé deflector guides the cut leaves toward the basket located at the rear of the harvester. This harvester includes a uni-

versal support that accommodates nearly all cordless drills / drivers. Terrateck recommends using machines with a minimum of 18V to ensure sufficient power and good autonomy.

Warranty	2 years

The manual tying tool allows the mechanization of bundling operations in the field. It is ideal for bundling vegetables or herbs harvested on vegetable farms. Whether outdoors, in a greenhouse, or in a workshop, this tool enables you to tie your plants with an elastic tie secured with a small aluminum alloy ring. The model without wire return allows

for bundling leafy vegetables without the operator being hindered by the wire when removing the bundle from the tool. This model is perfectly suited for crops with significant foliage. The model with wire return allows for bundling herbs while saving time on the « wire retrieval » operation.

GENERAL TERMS AND CONDITIONS

Article 1 : GENERAL POINTS

Any order placed (by email/fax/post/website) to TERRATECK implies full and unconditional acceptance by the Buyer of these terms and conditions which prevail over any other document of the Buyer, including its own terms of purchase and union conditions, except as otherwise agreed in writing by TERRATECK.

The Buyer acknowledges having received these terms of sale with a view to buying equipment from TERRATECK, prior to any order being issued.

Any document, other than these terms of sale, including catalogues, prospectuses, advertising and instructions are only for informative and reference purposes and are non-contractual.

Consequently, the prices and information contained in the catalogues, brochures and price lists are not binding upon TERRATECK that reserves the right to make modifications.

The sales contract is only valid subject to the acceptance of the buyer's order by Terrateck.

Article 2 : ORDER MODIFICATION

The order sent to TERRATECK may not be revoked by the client, without the written consent of TERRATECK.

Requests to modify the composition or volume of an order placed by a client shall only be taken into consideration if the request is made in writing, including faxes and e-mails, and is received by the TERRATECK no later than 8 days following the reception of the initial order by TERRATECK.

Should the client modify the order, TERRATECK shall no longer be bound by the lead times agreed for its fulfilment.

Article 3 : PRODUCTS

The products on offer are those which appear on TERRATECK's www.terrateck.com website, subject to the availability of stock. TERRATECK reserves the right to modify the products and their characteristics at any time and without notice. Each product is presented on the website in the form of a description showing its main technical characteristics. Although the photographs are made as accurately as possible, TERRATECK shall not be bound by them in any way and they shall have no contractual value.

Article 4 : DELIVERY TIME

TERRATECK strives to respect the delivery time indicated on the acceptance of the order.

However, the lead times are set according to stock availability, the information brought to the attention of TERRATECK on the day of the order and external contingencies. These delivery times are provided for informative purposes as a rough guide only, given that these depend largely on the availability of the carriers, the order in which the orders are received, the availability of the materials, parts and raw materials. Under no circumstances shall any compensation be paid for a late delivery. TERRATECK shall be automatically released from any commitment relating to delivery times in the following situations, including without limitation:

- If the Buyer violates the payment terms;
- In the event of force majeure including a pandemic or epidemic affecting the normal conditions of supply, delivery or production;
- In the event of a shortage of raw materials, the unavailability of carriers, materials or parts.

Article 5 : PRICE

Terrateck's prices are provided ex-works, in Euros, exclusive of tax, based on the exchange rate on the day of the order. They may be revised in the event of a significant change in monetary parity. They may also be revised in the event of a significant and sudden increase in the price of raw materials. In such an event, the details will be set out in the special terms and conditions.

Article 6 : TRANSPORT AND DELIVERY

Regardless of the transport mode, shipments will be fulfilled under the express responsibility of the Buyer. The Buyer shall bear the expenses, liability and risk for the transport, insurance, customs and excise and handling operations in shipping the products to the site, and shall be responsible for inspecting the shipments on arrival, making any necessary claims against the carrier and recording any reservations that may be required with the carrier.

Regarding national shipments, any product that has not been the subject of reservations notified by registered letter with acknowledgement of receipt or by an extra-judicial act within three (3) days of its receipt from the carrier, in accordance with the Article L. 133-3 of the French Commercial Code, a copy of which will be sent simultaneously to TERRATECK, will be considered accepted by the client. However, in the event of a shipment fulfilled by TERRATECK, the Buyer agrees to express its reservations upon delivery. These reservations shall be added to the delivery note. Any claim made at a later date shall not be taken into consideration. In the event of the client picking up a shipment directly from Terrateck, the products shall be deemed inspected at the time of collection. Under no circumstances shall a transport credit note be accepted should the Buyer organise the collection of the equipment. Each delivery shall be accompanied by a delivery note containing all the details about the delivered products. The Buyer must promptly inform TERRATECK by any written means of any irregularities observed. If no reservations are expressed, Terrateck's deliveries shall be deemed to have been fulfilled correctly and in compliance with the delivery note.

Article 7 : RETURNS AND REFUNDS

Without prejudice to any measures that the client may take against the carrier such as those set out above, in the event of conspicuous defects or missing items, any claim, regardless of its nature, concerning the products delivered, shall only be examined by TERRATECK if it is made in writing and sent by recorded post with acknowledgement of receipt, email with acknowledgement of receipt or fax within the three (3) days as set out above.

The Buyer shall provide all the evidence for the defects or missing items observed.

Goods may only be returned to the client with the prior, written and express consent of the TERRATECK, obtained by fax or e-mail in particular.

The return shipping costs shall only be borne by TERRATECK if a conspicuous defect or missing items are indeed observed by the latter or its representative.

The return shipment of the products concerned may only be performed by the carrier selected or accepted by TERRATECK.

When a conspicuous defect or missing items are indeed observed following an inspection by TERRATECK or its representative, the client may only request the replacement of the non-compliant and/or missing items at the expense of the latter, that shall not be entitled to put forward a claim for compensation or cancel the order.

If and only if the non-compliant article or missing items cannot be replaced, TERRATECK will refund the sums paid within 15 days, and the client shall not be entitled to invoke any other prejudice that TERRATECK would be required to remedy. Transport costs will only be refunded by TERRATECK in the event of the non-compliance of the article.

The reception without reservations of the products ordered by the client covers all conspicuous defects and/or missing items.

Any reservation must be confirmed under the conditions provided above.

Claims made by the Buyer in accordance with the conditions and formalities set out herein shall not suspend the payment of the goods concerned by the client.

Under no circumstances shall TERRATECK be held liable for any destruction, damage, loss or theft that occurs during shipment, even if TERRATECK has chosen the carrier.

Article 8 : TERMS OF PAYMENT

Before any order, the buyer must create an account on the TERRATECK site. TERRATECK prompts the buyer to order and pay for its products in several stages, with the following 3 payment options:

Payment by cheque: Once at the final stage of the order process, the buyer can choose the «pay by cheque» option. The final stage prompts them to check all the information, read and accept these terms of sale by ticking the relevant box, and validate their order by clicking on the «Order with payment obligation» button. This last click marks the final conclusion of the contract. Upon validation, the buyer receives an order confirmation. In order to finalise their payment and trigger the ordering process, the buyer must send a cheque payable to «TERRATECK SAS» with the order references written on the back of the cheque to the following address: 600 rue Adam Grunewald, 62136

Lestrem, France. No cash payment should be sent. Only cheques issued by a French bank will be accepted. Upon receipt of the cheque, the order will be processed and the buyer will be informed by email including a message in their client account.

Payment by bank transfer: Once you have reached the final stage of the order process, the buyer can choose the «pay by cheque» option. The final stage prompts them to check all the information, read and accept these terms of sale by ticking the relevant box, and validate their order by clicking on the «Order with payment obligation» button. This last click marks the final conclusion of the contract. Upon validation, the buyer receives an order confirmation. In order to finalise their payment and trigger the ordering process, the buyer must contact their bank to transfer the amount corresponding to their order to the TERRATECK bank account, the contact details of which have been sent to the buyer. Upon receipt of the transfer, the order will be processed and the buyer will be informed by email.

Secure payment by credit card (using the PAYZEN system): Once you have reached the final stage of the order process, the buyer can choose the «pay by bank card» option. Then, the buyer selects the type of card they want. The next stage prompts them to check all the information, read and accept these terms of sale by ticking the relevant box, and validate their order by clicking on the «Order with payment obligation» button. Finally, the buyer is redirected to the secure PAYZEN interface to securely fill in their credit card details. If payment is accepted, the order is registered and the contract finally concluded. Payment by credit card is irrevocable. In the event of fraudulent use thereof, the buyer may demand the cancellation of the payment by card, in which case the sums paid will be credited or returned. The responsibility of the holder of a bank card is not engaged if the disputed payment has been proven to be conducted fraudulently from a remote location without the physical card being used. To obtain the refund of the fraudulent debit and any bank charges incurred by the transaction, the cardholder must contest, in writing, the debit from their bank according to the terms and conditions specified with the latter or by law.

Article 9 : PAYMENT AND RETENTION OF TITLE

Payment shall be made in accordance with the terms agreed when the order is placed.

Should a payment by banker's draft be accepted, the Buyer agrees to return the acceptance within eight days of receiving the invoice or corresponding statement.

In the event of a cash payment by cheque, the Buyer agrees to settle the payment on receiving the invoice.

In these cases, no delivery shall be fulfilled until the banker's draft or cheque has been received by Terrateck.

Invoices must be paid in accordance with the terms set out on the invoice, without any discount.

The transfer of ownership of the products shall be suspended until the principal and other charges for the goods are paid for in full by the client, even if a deferred payment has been granted. Any stipulation to the contrary, including those in the terms of purchase, shall be treated as if it had never existed, in accordance with article L. 624-16 of the French code of commerce.

By express agreement, TERRATECK is entitled to exercise its rights pursuant to this retention of title clause, for any of its debts, on all of its products in the possession of the client, given that the latter are deemed by agreement to be unpaid, and TERRATECK may repossess them or claim them as compensation for all its unpaid invoices, without prejudice to its right to cancel current sales as set out below.

By express agreement, Terrateck's sales contracts shall still remain valid under the condition subsequent of the full payment by the Buyer on the set due date or dates.

Should the payments not be settled on the dates agreed by the parties, TERRATECK reserves the right to retrieve the item delivered and rescind the contract should it see fit. Any expenses associated with this return operation shall be borne by the Buyer.

The issuance of a banker's draft or any other document incurring an obligation to pay shall not constitute payment under this provision.

Regardless of any previous agreements concluded previously, all outstanding amounts shall become immediately due should one of the payments not be settled by the set date.

Regardless of the agreed mode of payment, any payment that is late by more than 8 (eight) days in relation to the set due dates shall result in the following, without the requirement to give notice:

- The right of Terrateck to suspend the performance of any other orders, which may have been accepted, notwithstanding any claims for damages;
 - A yearly penalty of 10.05%, due automatically and immediately, shall be applied, which will be debited from the client's account;
 - A fixed fee for recovery expenses of €40 shall be applied.
- The invoicing of costs of any kind incurred by TERRATECK or charged to it for the purpose of recovering this debt should these costs exceed €40.

Article 10 : PROOF OF THE TRANSACTION

The computerised records, kept in TERRATECK's computer systems under reasonable security conditions, will be considered proof of the communications, orders and payments between the parties. Purchase orders and invoices are archived on a reliable and durable medium which can be produced as proof.

Article 11 : LEGITIMATE REFUSAL OF AN ORDER

Should the client place an order with TERRATECK, without having paid for a previous order(s), TERRATECK may refuse to honour the order and deliver the goods concerned, without the client being entitled to any claim for compensation, for any reason whatsoever.

Article 12: WARRANTIES AND LIABILITY

Terrateck and the buyer mutually recognise that they familiar with the products sold in accordance with professional standards.

12.1. Warranty conditions

Terrateck's products are guaranteed for one year from the date of delivery. The warranty is simply restricted to the replacement of the parts deemed defective by Terrateck's technical department. Any shipment and labour costs shall be borne by the Buyer. Any request to activate the warranty must be accompanied by the defective part, the machine number, the invoice as well as the date of first use.

Wear parts, tyres and flexible hoses are not included in the warranty. Any improper use of the equipment or any modification of the equipment by an unauthorised person and/or without the prior written consent of TERRATECK or the use of non-original spare parts will void the warranty.

Similarly, defects and deteriorations of the delivered materials resulting from abnormal conditions of storage and/or maintenance at the client's premises, including in the event of an accident of any kind, shall void the warranty.

To invoke this warranty, the Buyer must promptly notify TERRATECK in writing of the defects attributed to the product, along with any evidence to support the latter. The buyer must give Terrateck every opportunity to examine these defects and provide a solution to them.

The warranty offered by TERRATECK is expressly limited to the replacement of parts recognised as defective by its technical department; consequently, no compensation for consequential damage or operating losses shall be admissible.

12.2. Obligations of the parties

TERRATECK is only required to ensure that its product complies with the specifications of the order form and its technical data sheets, which are available on request. The Buyer shall be responsible for the product chosen and the suitability of the machine with the result expected by the Buyer or its client, as well as the purpose for which the machine is to be used. It is responsible for its proper use in accordance with professional standards and the regulations. Under no circumstances is Terrateck bound by a performance obligation. The Buyer or Retailer shall be responsible for advising its own customers on how to use the products properly.

Terrateck shall be at the disposal of the Buyer Retailer to assist the latter to the best of its knowledge and experience.

The Buyer Retailer is responsible for providing its customer user with the equipment's accompanying documents (instructions, warranty card, certificate of compliance, etc.) Terrateck shall be at its disposal to provide any missing documents, if needed.

12.3. Out-of-warranty services

An initial quote will be drawn up prior to any servicing and replacement of parts not covered by the warranty undertaken by Terrateck's after-sales department. The expenses of the after-sales services carried out by Ter-

rateck's technicians shall be borne by the Buyer.

12.4. Case of Terrateck as manufacturer
When acting as manufacturer or sub-contractor, Terrateck shall only be responsible for its own work.

12.5. Force majeure

Terrateck shall be released from its contractual obligations in the event of force majeure. Force majeure accidents affecting TERRATECK's production and storage, the unavailability or shortage of supplies, the default of a carrier, fire, flooding, broken machinery, strike action involving all or part of the staff, public decisions, the actions of a third party, war, epidemics or pandemics, or any external event, which delays, prevents or renders the performance of TERRATECK's commitments economically exorbitant, shall discharge or suspend TERRATECK's obligations without incurring any liability to the Buyer.

Article 13 : EQUIPMENT IN STORAGE OR USED FOR DEMONSTRATION PURPOSES

The acceptance of the equipment by the agent shall be deemed acceptance of Terrateck's terms and conditions of sale as well as the stipulations which are specific to equipment storage. In addition to the provisions above, in the event of the equipment being stored by Terrateck, the depository agrees to the following:

- To pay for the outbound-inbound shipping expenses and the handling entailed by the equipment concerned;
- Take any provisions needed to preserve and maintain equipment in good condition;
- Not to withdraw any parts without Terrateck's written consent;
- To bear all expenses for repairing any damage to the equipment incurred during storage;
- Return the said equipment to Terrateck on its request or when the agreed storage period expires;
- Immediately notify Terrateck in the event of a sale;
- Insure the stored equipment as «third-party goods» with an insurance company that is known to be solvent and give documentary evidence of this policy to Terrateck on request; the coverage of the latter must be at least equal to the value of the equipment;
- Take out any insurance that it deems necessary for the stored equipment in order to cover its own needs.

In the event of the equipment being used for demonstration purposes, the depository shall be exclusively responsible for the conditions in which the machine is demonstrated and used. It may not, under any circumstances, without the prior written consent of Terrateck, use it for any other purpose than its demonstration, or entrust it to any other party, regardless of the use. If, on the expiry of the agreed storage period, the equipment is not returned to Terrateck, the latter will have the option to take back the equipment or charge the depository for it. The invoice concerned will be made out in accordance with the usual terms and conditions of sale. Should the equipment be returned in poor condition, Terrateck shall undertake any reconditioning work at the expense of the depository. Terrateck shall charge the depository for the said expenses.

Article 14 : INTELLECTUAL PROPERTY

The sale of the equipment does not confer any right to the buyer on the trademarks or distinctive signs affixed by TERRATECK to the said equipment and the associated documentation. Furthermore, TERRATECK shall remain the owner of all the intellectual property rights, including those pertaining to the photographs, presentations, studies, drawings, models and prototypes produced within the context of supplying the equipment. Consequently, the client shall not reproduce or use said photographs, presentations, studies, drawings, models and prototypes, etc., without the express, written and prior authorisation of TERRATECK.

Article 15 : PERSONAL DATA/GDPR

The personal data collected for home shopping purposes must be recorded in order to confirm, validate, track and ship the client's order; without these data, the client's order cannot be processed. In order to do this, these data may be sent to TERRATECK's service providers. No personal data are sold on or sent to third parties for any other purpose than to process orders. Personal data are kept for a period of 5 years. Pursuant to the «Informatique et Liberté» (data protection and privacy) law of 6 January 1978 as amended and European Regulation No. 2016/679/EU of 27 April 2016, individuals have a right of access, opposition, rectification, portability and erasure as well as the right to restrict processing regarding their personal data. If

you wish to exercise your rights and obtain your personal information, you can contact TERRATECK at the following address: contact@terrateck.com.

Article 15 : INSURANCE AND LIABILITY

Terrateck is insured for all of the risks generally associated with its activity with a level of cover that is generally associated with the profession. It keeps the valid certifications and warranty tables at the disposal of its customers. The client renounces any claim of any kind that should exceed the warranty limits provided by TERRATECK's insurance policy and the parties expressly agree that the latter is of the essence of the contract.

Article 16 : SPECIAL CONDITIONS

These terms of sale do not exclude the application of special terms of sale, which would then prevail over these terms of sale in the event of a contradiction.

Article 17 : FORUM SELECTION AND GOVERNING LAW

Relations between TERRATECK and its client are exclusively governed by French law.

The parties agree to seek an amicable solution to any dispute which may arise from the interpretation or performance of the contract, these terms of sale or any special conditions.

Should they fail to come to an amicable solution, the parties will refer the dispute to the court of competent jurisdiction within the jurisdiction of the Judicial Court of BETHUNE, even if there are several defendants or there is a claim for contribution from a third party.
