

Level up your seeding precision and consistency on the farm with a vacuum planter.

Pumpkin, sunflower, vegetable and flower farmers now have an affordable precision vacuum planter available to them! The WZ-G Series planters are designed for tractors with 12V electric outputs. Choose to add 1 up to 5 sowing units on your tractor with a minimum row spacing of 9.8 inches. They are suitable for sowing on open fields and on raised beds.

FEATURES

- Vacuum system is 12 Volt Electric
- Light Weight Units
- Single transmission on each sowing unit
- Quickly adjust row spacing
- Change between crops easily
- 10in (25cm) minimum distance between rows

SEEDER OPTIONS

NUMBER OF ROWS

- Choose between 1 to 5 row units
- Row units include seeders, a single or double fan vacuum system, hoses, and vacuum to toolbar mounting adapter with a 4 pin 35 amp plug.

CLOSING WHEEL

- Concave - Ideal for corn and soybean seeds or other large row crop varieties.
- Flat - Ideal for Vegetable seeds or small to medium varieties. Required for Multi-Line Kits.

TOOLBAR TYPE

- Category 1, Tilmor 520, Thiessen Steerable and Tilmor Super E toolbars available

TOOLBAR OPTIONS

- Seeder Toolbar Lowering Kit - Lowers seeder mounted toolbar for lift arms that don't go low enough on their own. Required to mount on belly of the 520 Tilmor Tractor and Super E

FEATURES

1	Three Point Linkage - Cat. 1 and Cat. 2
2	Vacuum Fan
3	Chassis
4	Parking Stand
5	Clod Remover
6	Soil Leveler Wheel
7	Sowing Vacuum Metering Unit
8	3 Liter Seed Hopper
9	Shoe Opener and Seed Tube
10	Screw Sowing Depth Adjustment
11	Gearbox for Seeding Distance Adjustment
12	Heavy Closing Wheel and Metering Unit Traction

ACCESSORIES

DOUBLE DISC OPENER Recommended for soils with small residues or debris. Provides increased clog resistance compared to the traditional shoe opener, penetrating the ground and shedding debris. Shielded bearings help prevent bearing failure due to soil accumulation.

SCRAPER KIT Prevents soil accumulation on the rear wheel -- recommended for use in higher moisture settings. A clean rear wheel = improved consistency in planting.

SEED CLEAN OUT KIT 2 part kit for cleaning seed residue from the seed hoppers. Recommended for use when switching crops or when planting is complete. "Seed Slide" helps clean out medium and large size seeds (corn, sunflower, chickpea, soya, etc.). "Small Seed Clean Out Vacuum" connects directly to the vacuum fan and allows you to collect seed residue in a removable tank.

SEED COVER KIT Gathers additional soil for improved closure of the planting furrow, allowing better germination. Especially recommended for small seeds.

SEED PLATE PACK 1 of Each Plate Below is Included:

- 5.5mm, 18 Hole (Corn)
- 2.5mm, 36 Hole (Beets, Sunflowers)
- 4.5mm, 36 Hole (Beans, Peas)
- 0.8mm, 72 Hole (Carrots, Closely Spaced Brassicas)
- 1.5mm, 72 Hole (Spinach, Radishes, Turnips)

Customize your selection and find more options on the Vacuum Seed Plate Page.

MULTI-LINE KIT Adding Multi-line Kits to your Wizard Planter allows you to sow 2 or 3 rows with one planter, while also reducing the row distance between sowing units. Multi-line kits include a new furrower with 2 or 3 shoes, a new drop tube assembly, a second pin for securing the drop tube assembly and a new seeder unit cover that separates 2 or 3 rows of seed and guides them to the multiple drop tubes.

ROW MARKER KIT This row marker ensures consistent and accurate field passes by marking the line for the next pass. Easily lift the marker from the tractor seat using the attached rope for seamless operation.

VACUUM SYSTEM		
A	Seed Discs	The dimensions of the holes in which the air passes have various dimensions based on the size, shape and weight of the seed.
B	Seed Singulator	The seed singulator allows you to improve sowing as it eliminates double seeds and reduces to one seed per hole.
C	Ejectors/Seed Guides	The ejectors, in contact with the sowing disc, ensure the expulsion of the seed continuously and constantly.
D	Gasket	The rigid plastic gasket allows the opening and closing of the depression exactly where it is needed.
E	Ease Of Use	The use and set up of our sowing metering unit are simple and quick, starting from the opening of the cover which does not require any tools.
