

TILMOR EDGE OF PLASTIC WEEDING

Manage plastic mulch edges with ease! The Edge of Plastic Finger Weeder helps control weeds in the hard-to-reach space alongside plastic mulch, reducing the need for hand weeding. Spyders break up soil crust while polyurethane fingers flick out white-thread-stage weeds without damaging the plastic.

The adjustable weeding head lets you fine-tune finger pitch and positioning to match your field conditions. Purchase the finger weeder system alone or choose the complete kit with spyders and toolbars for mounting to compatible Tilmor cultivation tractors, Allis G and Farmall tractors, Kubota L245 tractors, or Category 1 three-point hitch tractors.

FEATURES

DESIGNED FOR PLASTIC MULCH EDGES

- Cultivates close to the plastic to control weeds in hard-to-reach areas.

ADJUSTABLE FINGER

- Fine-tune finger angle for soil conditions and desired cultivation action.

ROTATING SPYDER WEEDER

- Adjust angle of spyders to hill more or less and to adjust aggressiveness

FLEXIBLE CONFIGURATION

- Use one, two, or three polyurethane fingers depending on crop spacing and field conditions.

KIT OPTIONS

- Buy the finger weeder system alone or choose the complete kit with spyders and mounting toolbars.
