

The Tilmor Tine Weeder provides effective mechanical weed control by targeting small, early-stage weeds. Its flexible spring tines gently agitate the top layer of soil to uproot weeds while not damaging established crops. The tines also break up surface crust, improving water infiltration and soil aeration.

Built with four staggered rows of tines spaced 1.5 inches apart, the Tine Weeder provides consistent coverage while allowing crop residue to pass through. Each tine is individually adjustable, letting you fine-tune cultivation aggressiveness for different soil conditions and crop sensitivities. It can also be used for stale seedbed preparation.

Designed for versatility, the Tine Weeder can be mounted under the belly of a cultivating tractor or on a rear Category 1 three-point hitch, depending on your setup.

FEATURES

- 35 or 53 inch widths available
- Mechanical weed control without chemical inputs
- Spring tines agitate soil to remove small weeds
- Breaks surface crust for improved water movement
- Staggered tine layout for full coverage and residue flow
- Individually adjustable tines for precision control
- Belly-mounted or rear-mounted compatibility
