

TILMOR TORSION WEEDERS

The Torsion Weeder provides simple, economical in-row weed control through shallow cultivation. Its flexible tines uproot small weeds while working around established crops, making it a useful addition to a mechanical weed control system. It performs best in loose soil, and pairing it with a sweep, shovel, or spyder ahead of the tool helps open up tighter soils for better results.

Ideal for most row crops with spacing of 10 inches or greater, the Torsion Weeder works best on weeds from the cotyledon to two-leaf stage and in well-rooted crops before the canopy closes.

FEATURES

- An easy-to-use tool that complements other mechanical weeding implements
- Optimum weed stage: Cotyledon to two-leaf stage
- Optimum crop size: Well-rooted crops before canopy closure

MOUNTING OPTIONS

- Complete Mounting Kit: Includes mounts to clamp wires on a 2" or 1.5" toolbar. Allows for adjustment of the pitch and angle of torsion wires for fine tuned weed control.
- Torsion Angle Mounting Kit: Includes bracket that allows for adjustment of the angle of torsion wires for fine tuned weed control.
