SPRING HOES

Add Spring Hoe Weeders to your tractor to scrape and bury weeds in the row and right next to the row. This tool mounts at an angle into the soil in order to uproot weeds and cause just enough tension to make a small, 1 inch hill. The small hilling action provides two things; it buries tiny weeds, and it creates a better soil structure for finger weeders to be a more effective tool. This tool is great to use on its own and it can be even more effective in combination with finger weeders.

FEATURES

- Spring tension pushes soil through plant row
- Mounting available for walk-behind and four wheel tractors
- In-row & between row tool
- Use on plants as small as 3 inches
- Creates a 1 Inch small hill
